## Test Method :

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

### ①Measurement place

A place that is nothing of extreme light reflected in the room.

### ②External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface.

( $E_e \leq 10\text{Lux}$ )

### ③Standard transmitter

A transmitter whose output is so adjusted as to  **$V_o=400\text{mVp-p}$**  and the output Wave form shown in Fig.-1.According to the measurement method shown in Fig.-2 the standard transmitter is specified.

However , the infrared photodiode to be used for the transmitter should be  $\lambda_p=940\text{nm}, \Delta\lambda=50\text{nm}$ . Also, photodiode is used of PD438B( $V_r=5\text{V}$ ).

### ④Measuring system

According to the measuring system shown in Fig.-3
